公司历史

COMPANY HISTORY

Shenzhen Wesion Technology was established in **November 2014**.

The company's current main business includes the "**Khadas**" in-house brand and **customised ODM services**.

The **Khadas** brand is positioned for the open source **DIY** maker market, and it's main customers are outside China.

Our team is relatively young, and consists of people from **Guangdong, Fujian, Hubei, Hunan, Chongqing and Singapore**, with an average age of **29 years**.

The company is specialises in the **Amlogic** and **Rockchip** product lines and is currently working with the **Google Fuchsia** team to develop **VIM3** products for the **AI market**.

In 2018, we released a new product, **Khadas Tone Board**, which is positioned for the **Hi-Fi audio market** and paves the way for **intelligent voice products**.

In the future, as awareness of the **Khadas** brand continues to increase, our product roadmap will also include the **consumer market**, e.g. **Intel NUC micro-host**.

项目案例

PROJECT CASES

[1] Geekbox is our complete cross-border product solution for [Geekbuying.com](http://www.geekbuying.com), the largest electronic cross-border e-commerce platform in Shenzhen at the time. On the day of product launch, it was on Yahoo News. Geekbox products were ranked Top 10 of 2015 by Linux.com. <http://finance.yahoo.com/news/meet-geekbox-tiny-pc-built-213756913.html>

[2] Popsical is a Singapore brand that focuses on smart Karaoke products as well as professional audio streaming services. We provide one-stop services for Popsical including: product positioning and design, industrial design, mold development, production processing and assembly. First and current generation products of Popsical are designed by our company. <https://popsical.com>

[3] Atmoph is a smart display product that can be used to push display content via mobile phone: <https://atmoph.com>

[4] VIM was the first generation of products released by Khadas. For more information, please refer to: <http://khadas.com/vim/>

[5] VIM2 was released at the end of 2017, and was selected by Google as the main ARM64 development platform for the R&D of the Fuchsia OS in March 2018: <https://fuchsia.googlesource.com/zircon/+master/docs/targets/Khadas-vim.md>
